

BOOM INSPECTION & REPAIR, INC.

Why Should Your Equipment Be Inspected Regularly?

Most, if not all, of the concrete placing equipment manufacturers require annual inspections. One of the key reasons is to ensure the boom's integrity is maintained. Weakening of the boom's supporting structure is a common problem that may be brought on by cyclic fatigue, imperfections in the design, and/or imperfections in the manufacturing process. Even the smallest hairline crack has the potential to pose a serious risk to operators and others on a job-site. Additionally, over time, this also decreases the life span of the equipment.

Annual inspections can keep a small problem from becoming a large problem if caught in time. Inspections can save money in the long-run by helping to ensure that the equipment fulfills its maximum lifetime service potential. As equipment ages, inspections should be performed more frequently to establish safe and efficient operation. Proper maintenance and inspection of your equipment helps to retain the equipment's market resale value.

The cost of having equipment inspected, repaired, and certified is nothing compared to the peace of mind that comes with knowing that your equipment is in optimum working condition.
